

SC7500 Employee Safe

Employee self-service solution to count down and rebuild tills

Increase your efficiency and profits through automation

Employee safes are excellent tools for increasing efficiency and profits by automating the task of receiving and issuing employee money. Solutions like the SC7500 reduce counting errors, cut cash operations labor, and provide real-time data of transactions and holdings. Let the SC7500 give you peace of mind and help you focus on other areas of your business.

Reduce or downsize the employee bank/vault labor in casinos

Casino cages already manage a lot of transactions, and it takes a significant amount of labor to operate the employee vault to issue and count employee banks and tills. The SC7500 lets employees process their banks and tills themselves at the beginning and end of every shift, so you can minimize labor in the cage and employee vault, increasing profitability.

Reduce cash office labor in retail

Implementing the SC7500 employee safe in your cash office helps you reduce labor and lets managers focus on more important tasks. Employees can fill starting tills and deposit end-of-shift totals without involving other employees or supervisors.

Eliminate rolled coin

Rolled coin is remarkably expensive. Organizations want to start employees off with a particular mix, so issuing the exact amount of coin you want without buying rolls is ideal. The coin module of the SC7500 lets you load the machine with loose coin, and it issues employees the exact amount of coin you specify, so you never have to pay for rolled coin again.

Easy to use

Making the system easy to use is critical for eliminating errors and reducing employee training time. With just the push of a button after logging in, the SC7500 automatically dispenses a user's preassigned bank. It's just as easy to make change, validate mid-shift deposits, and drop a bank at the end of the day. Employees are done using SC7500 in less than sixty seconds.

Employees only need to press one button to dispense a daily bank in less than sixty seconds. Depositing cash, coin, and performing mid-day functions is just as simple.

Reduce errors and variances

When several people handle a single lot of money, or if you count by hand, errors and variances are certain. Sometimes the variances come from employee shrinkage, but often they're from honest mistakes, either from the issuer, the recipient, or some other function in between. Eliminate the errors, suspicion, and problems of variances by letting the SC7500 accurately and quickly count cash and coin.

Reporting that improves your organization

The SC750 lets you securely monitor inventory from any location with its remote management and reporting capabilities. Quickly determine your current holdings, track money by employee or location, and get reports and cash flow in and out of the safe.

Get accounting usable data

Some organizations have several different functions that require several different point-of-sale software solutions, so you need a solution that can provide accounting with a generally-accepted data format. The SC7500 sends all data as comma-separated value (CSV) files, so it's easy to import into the accounting system with minimal setup.

SC7500 Employee Safe

TECHNICAL SPECIFICATIONS	
Recycler Cassette Capacity	Up to 3,000 Notes
Deposit Cassette Capacity	Up to 3,000 Notes
Number of Cassettes	6
SC7500 Capacity	Up to 15,600 Notes
Deposit / Dispense Pocket Capacity	300 Notes
Deposit / Dispense Speed	10 Notes Per Second
